ggPdf

Minimal and light keyboard-driven PDF viewer with Vim-style motions and text selection, based on PDFium engine.

Selection with ggPdf	Document handling with ggPdf
	

Install & use

Prebuilt installers

Download an installer from the releases page

Build from source

Requires Rust/Cargo and PDFium for your OS and architecture. Place PDFium at `pdfium/libpdfium.dylib` (macOS) or `pdfium/pdfium.dll` (Windows).

```
git clone https://github.com/JensOlschewski/ggpdf
cd ggpdf
```

Build and install (rerun to update):

- **macOS:** `./install.sh` installs to `/Applications/ggPdf.app`.
- **Windows (PowerShell):** `.\install.ps1` installs to `%LOCALAPPDATA%\Programs\ggPdf` and adds Start menu and **Open with** entries.

If PowerShell blocks the script, use `powershell -ExecutionPolicy Bypass -File .\install.ps1`. Neither script changes your default PDF viewer.

Or run without installing:

```
cargo run -- assets/test-pdfs/letter.pdf
```

⌨️ Mappings

Document mode

Keys	Action
`gg` / `G`	Go to top / bottom
`j` / `k`	Scroll down / up 50 px
`Ctrl+d` / `Ctrl+u`	Scroll down / up 150 px
`Ctrl+k` / `Ctrl+j`	Zoom in / out
`Ctrl+0`	Reset zoom to 100%
`i`	Toggle dark/light mode
`q`	Close ggPdf
`c`	Enter/Leave text cursor mode
`v` / `Shift+v`	`VISUAL` / `VISUAL LINE`
`yis` / `yip`	Copy sentence / paragraph
`ctr+f`	fzf pdf search
`ctr+shift+f`	Native file dialog

Cursor and visual mode

Keys	Action
`h` / `l`	Move left / right one character
`j` / `k`	Move down / up one text line
`w` / `b` / `e`	Next word / previous word / word end
`W` / `B` / `E`	WORD motions (punctuation stays in a word)
`0` / `^` / `$`	Go to line start / first nonblank / end
`Esc`	Clear selection, or exit from `CURSOR`
`y`	Copy selection and exit (linewise includes newline)
`is` / `ip`	Select sentence / paragraph in `VISUAL`

Outside text modes, `yis` / `yip` copy the sentence / paragraph under the mouse, or at the center of the window if the mouse is not over a page.

Prefix `h/j/k/l` and word motions with a count (e.g. `3j`, `2w`, `4l`).

⚙️ Configuration

ggPdf reads the first existing file of:

1. `$XDG_CONFIG_HOME/ggpdf/config.toml` (or `~/.config/ggpdf/config.toml`)
2. macOS: `~/Library/Application Support/ggpdf/config.toml`
3. Windows: `%APPDATA%\ggpdf\config.toml`

- `config.example.toml` lists every option and key binding with its default.

Copy it and edit.

- An invalid file is reported on stderr and the defaults are used.
- Undefined options keep their defaults.
- `ggpdf --print-config` prints the resolved config, a good starting point for your own file.

Appearance

- `[appearance]` holds colors (`#rrggbb` or `#rrggbbaa`), sizes, and fonts.
- Colors come as `_light` / `_dark` pairs.
- `font_file` points to a `.ttf` / `.otf` file used before the built-in font; empty means built-in.

Key bindings

Bindings are `"<key sequence>" = "<action>"` in four tables:

Table	Applies to
`[keys.document]`	Normal mode (scrolling, file-level keys)
`[keys.motion]`	Shared by cursor and selection modes
`[keys.cursor]`	Cursor mode: `motion` plus this table
`[keys.selection]`	`VISUAL` and `VISUAL LINE`: `motion` plus this table

License

ggPdf's own code is MIT-licensed (see `LICENSE`). PDFium's license is in `pdfium/LICENSE.txt`.
